CUBEROOT | NEWS, PLAINLY

Wire Illustrated Quick Start Guide

Philippine and world news in a calm reader, with large text, simple controls and optional breaking-news alerts.

24 October 2026 | Large-print edition | Web and Android

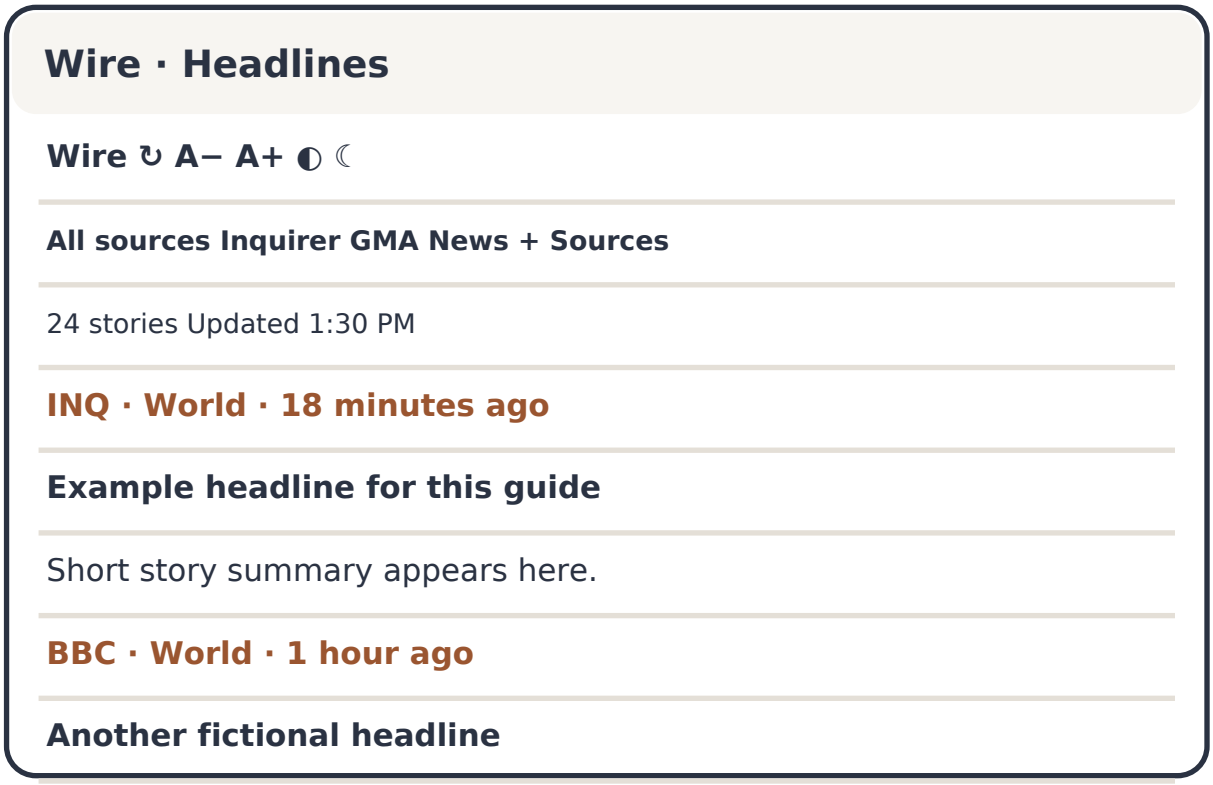

Screen illustrations reproduce Wire's current control names and approximate layout, using fictional example headlines. Installation and permission screens vary by device.

Contents

1. Open Wire
2. Choose headlines
3. Read a story and go back
4. Make text larger
5. Show or hide publishers
6. Enable breaking alerts
7. Refresh and read offline
8. Quick troubleshooting

1. Open Wire

Wire combines Philippine and world reporting in a calm, easy-to-read interface.

Source-matched illustration; fictional news examples.

1. On an Amazon Fire or Android device, visit the **Wire** card on Cuberoot and tap **Download Android APK**. Open the file and follow the device's install prompt.

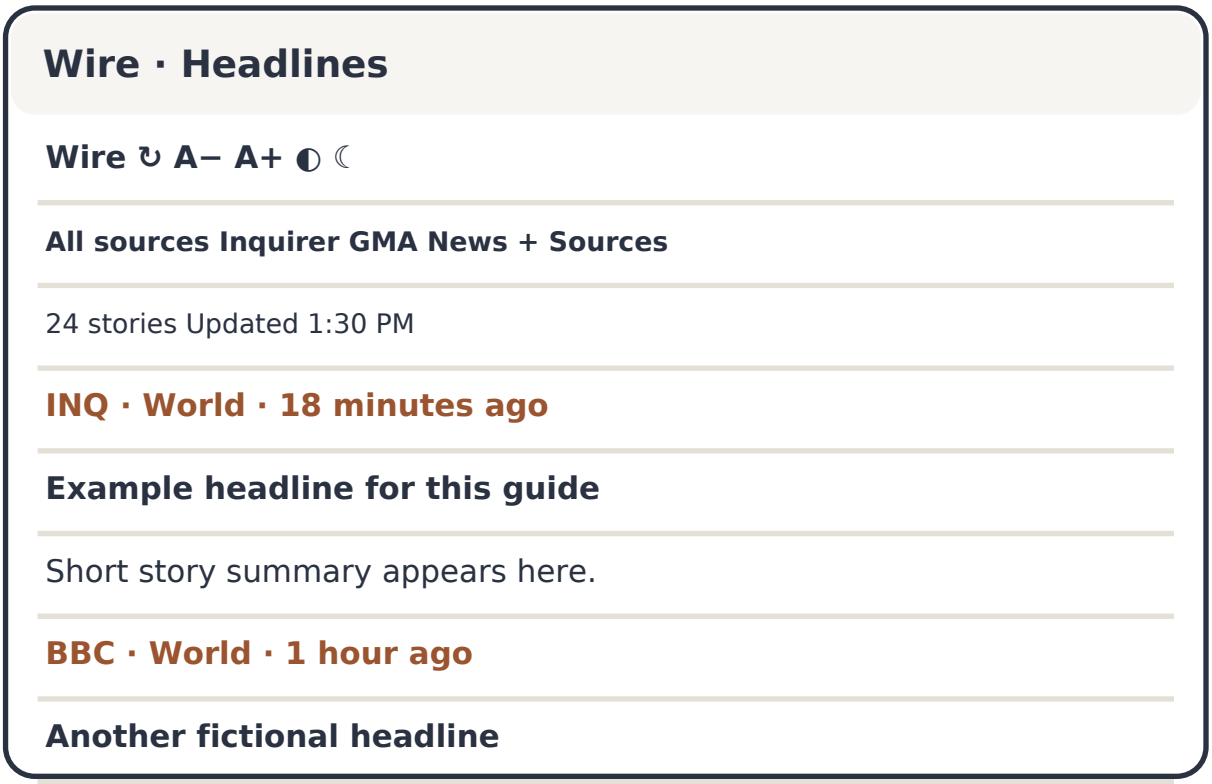

2. Launch **Wire** from its icon. No Wire account or password is required.

3. On iPhone, iPad or computer, open your existing Wire web-app shortcut or bookmark.

Good to know. Install signed APKs only from Cuberoot.

2. Choose headlines

The opening screen lists stories from enabled publishers.

Source-matched illustration; fictional news examples.

1. Tap **All sources** to see everything, or select a publisher chip such as **Inquirer**, **GMA News**, **BBC World**, or **CBC Top Stories**.

2. Scroll through the headlines. Each card shows a publisher label and relative publication time.

3. The **Updated** timestamp reports the published feed that Wire loaded; it does not mean every publisher updated at that instant.

3. Read a story and go back

Tap a headline to open Wire's cleaner article reader.

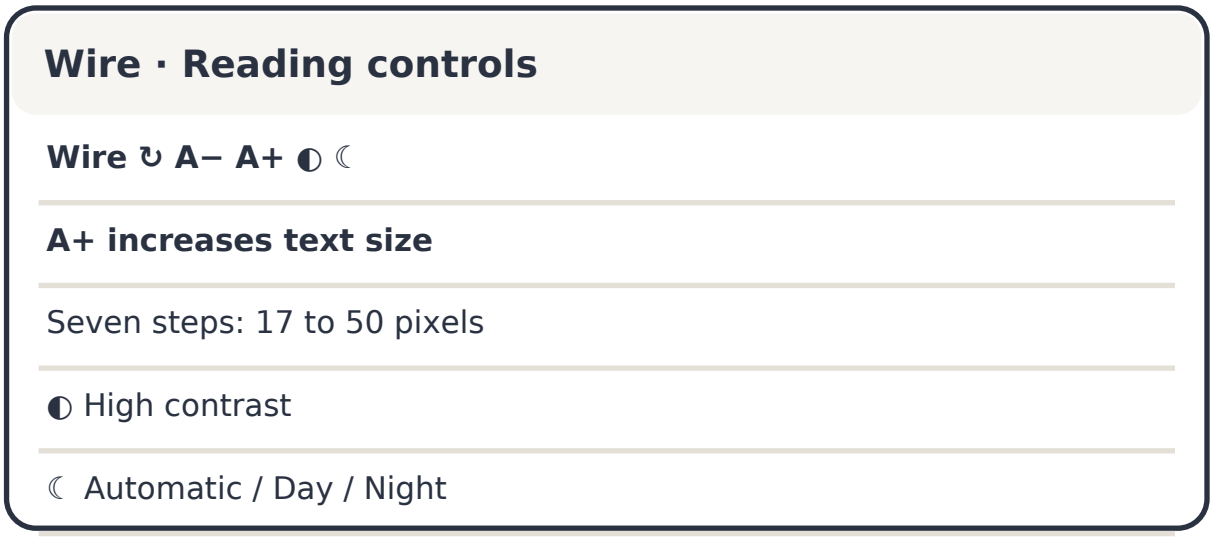

Source-matched illustration; fictional news examples.

1. Read the available article text without the original site's embedded advertising.
2. Tap **← All stories** or **← [publisher] headlines** to return to your headline list. Wire normally restores your position.
3. If marked **Headline only** or **Cut short**, use **Read it on [publisher]** when offered to open the publisher's website.

4. Make text larger

The reading tools stay visible across the top of Wire.

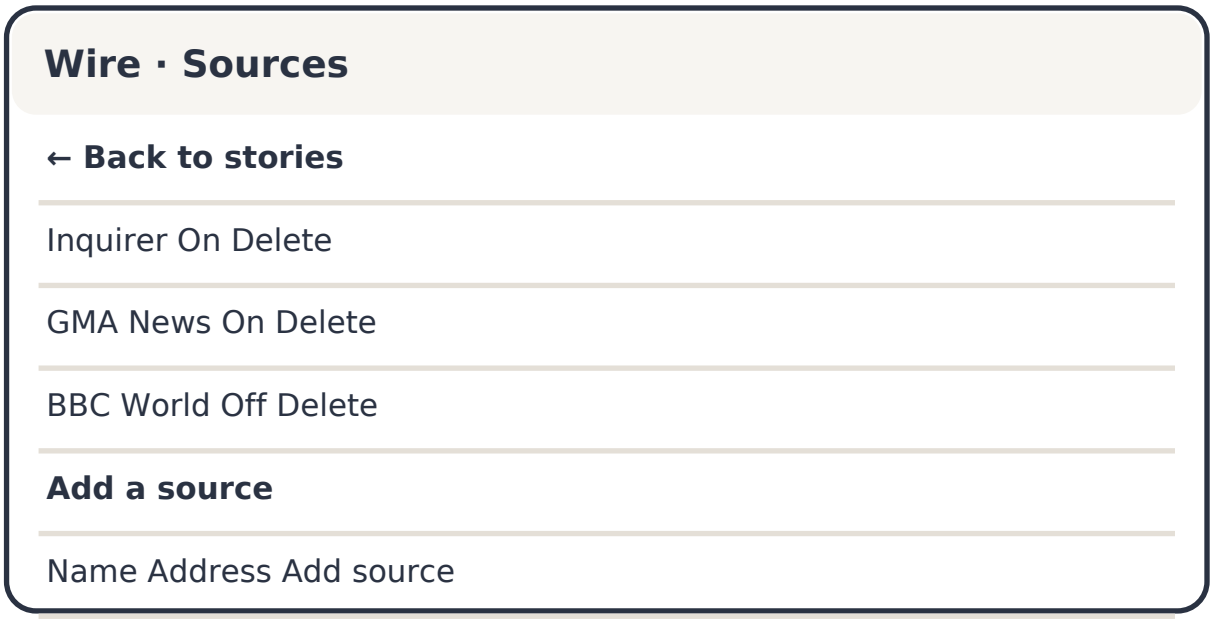

Source-matched illustration; fictional news examples.

1. Tap **A+** to enlarge text. Tap **A−** to reduce it; seven sizes range from 17 to 50 pixels.
2. Tap the **half-filled circle** to turn high contrast on or off.
3. Tap the **moon/sun** icon to cycle automatic, day, and night appearance. Choices are saved on this device.

5. Show or hide publishers

The + Sources chip opens your publisher settings.

Source-matched illustration; fictional news examples.

1. Tap **+ Sources** after the publisher chips.
2. Use **On** or **Off** beside each source to choose what appears in your headlines.
3. Tap **← Back to stories** to return. Hiding a source does not delete its published content.

6. Enable breaking alerts

News notifications are optional and must be enabled on each device.

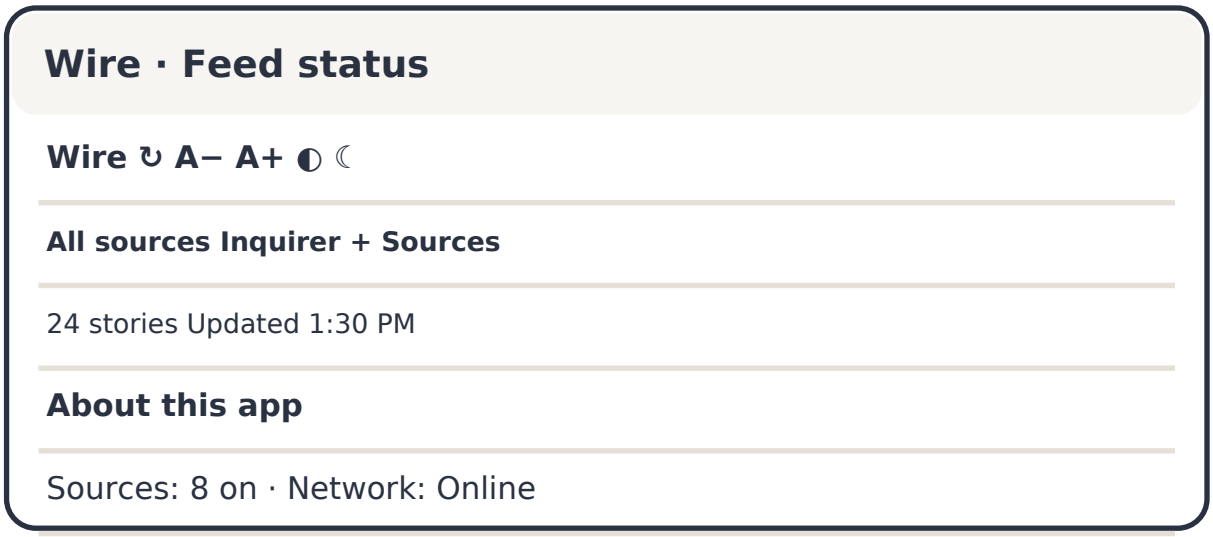

Source-matched illustration; fictional news examples.

1. On the main list, scroll to **Breaking-news notifications** below the stories.
2. Tap **Turn on** and allow notifications when the device asks.
3. The same panel offers **Turn off**. If it shows **Repair notifications**, tap it once while online.

Good to know. On iPhone or iPad, first add the Wire web app to the Home Screen and open it from its icon. Amazon Fire uses ADM; supported Google Android devices use FCM.

7. Refresh and read offline

Wire checks for newly published stories when connected.

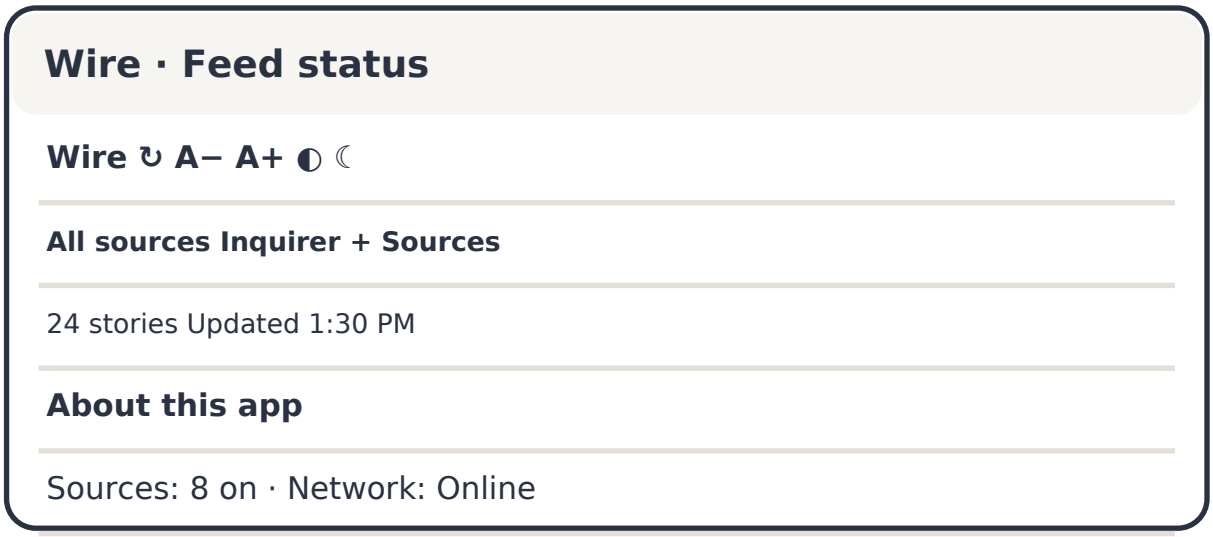

Source-matched illustration; fictional news examples.

1. Tap the ↻ top-bar control to check for the latest published feed.
2. Offline, some previously cached stories may remain available, but fresh news requires the internet.
3. If a notification arrives before its story appears, reconnect and tap ↻. The publication and notification paths can finish at different times.

8. Quick troubleshooting

Start with simple visible checks before reinstalling.

Source-matched illustration; fictional news examples.

1. No headlines? Confirm your connection, tap **All sources**, then ↻.
2. One source empty? Try another chip and check **+ Sources** for its On/Off state.
3. Missing notifications? Check Wire's breaking-news status and the device notification permission.
