

Another Text Editor (ATE)

Quick Start Guide

Version 0.3.2 · 11 November 2026

Large print · iOS/iPadOS TestFlight and Android APK edition

iOS requires a TestFlight invitation. Android is distributed through Cuberoot. Mac and Windows downloads are coming; desktop installers are not available yet.

Current downloads and online guides: www.cuberoot-systems.com/ate/

Your editor controls

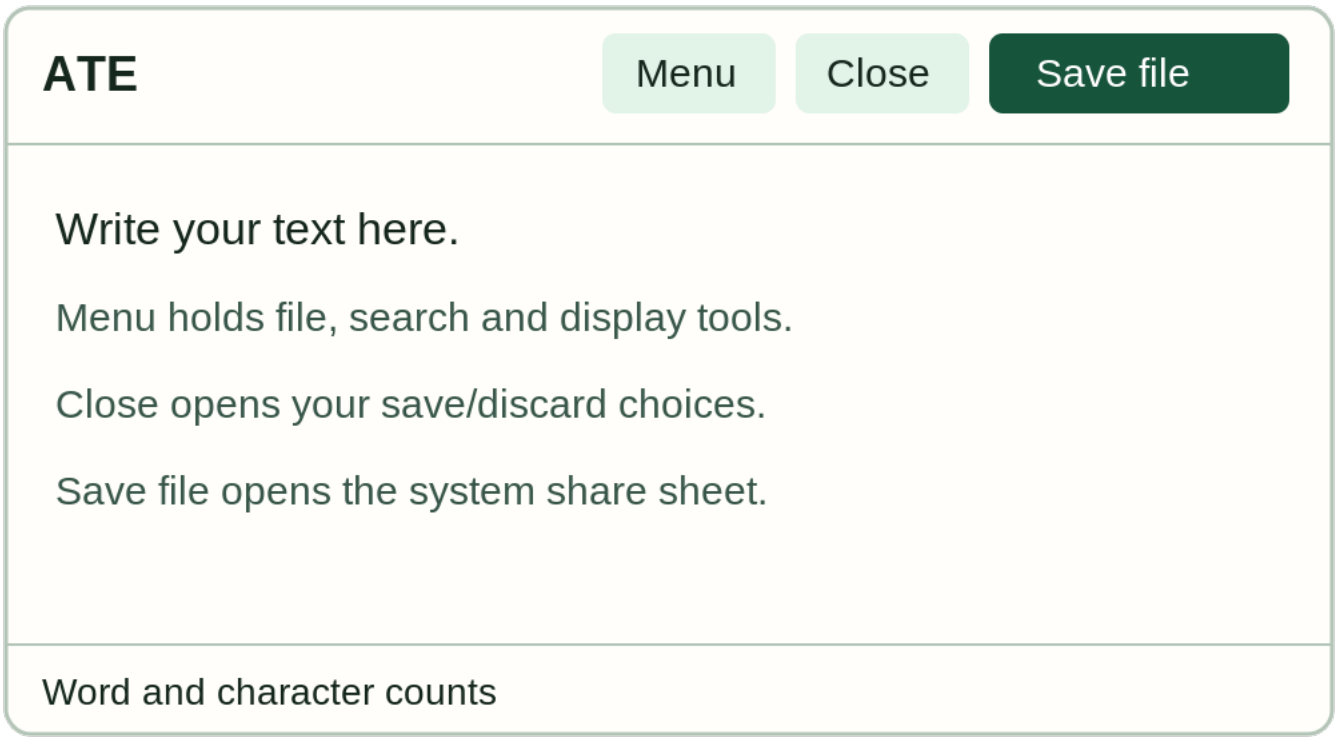

Illustration based on ATE 0.3.2; not a device screenshot.

1. Get ATE

ATE means **Another Text Editor**. It is a simple full-screen text and code editor. No account or sign-in is required.

• **Android:** download the signed APK from the ATE page on Cuberoot. Open the downloaded file and follow Android’s installation prompts. If asked, allow your browser or Files app to install this file; you can turn that permission off afterwards.

• **iPhone/iPad:** ATE is in TestFlight. Accept your invitation, open TestFlight and tap Install or Update. It is not yet an App Store release.

• **Mac and Windows:** desktop downloads are coming; no desktop installer is available yet.

2. Write or open a file

• Open ATE and tap the large editing area to write.

• To open an existing file, tap **Menu > Open** and choose a plain-text file from your device or an available file provider.

• Use **Menu > New** for a blank document. Confirm replacement only after saving anything you need.

3. Choose readable text

Tap **Menu**. Use **Text size** or A- / A+ to set the display from **10 to 54 pt**; the default is 27 pt. Choose Light or Dark, and Text or Icons for buttons. These settings change your view, not the contents of your file. Tap **Done** to return.

4. Save a separate copy

• In Menu, enter a **File name**, such as **notes.txt** or **script.py**. Tap Done.

• Tap **Save file**. On iPhone/iPad, choose **Save to Files** in the system share sheet. On Android, choose a file/storage app if offered, or another destination from the share sheet.

• Finish the system save/share action and check the destination. ATE saves/shares a copy; it does not overwrite the original opened file.

A local recovery draft is helpful, but it is not an independent backup. Save a file copy before clearing app data or uninstalling ATE.

5. Find, replace and copy

Menu > Search / Replace opens Find and Replace fields. Use Next or Previous to move between matches. Replace changes one match; Replace all changes the document. Undo mistakes with Ctrl+Z or Command+Z.

For copying the whole document, choose **Menu > Select all**, reopen Menu and choose **Copy**. Paste in your other app. Copy does not remove text.

6. Close your document

Tap **Close**, then choose **Keep editing**, **Save and close**, or **Close without saving**. Closing without saving removes the recovery draft and clears the editor; files already saved on the device remain.

iPhone/iPad: no extra “Editor closed” page appears. Use the Home gesture to leave the app. **Android:** Close also leaves the app; Android Back closes an open panel first, or opens the closing choices.

7. Try Vim only if you want it

With a hardware keyboard, choose **Menu > Editing > Vim**. Press **i** to type and **Esc** or **Ctrl+[** for Normal mode. Type **/word**, press Enter, then **n** for the next match or **N** for the opposite direction. Type **:** in Normal mode for a command. Return to **Standard** for ordinary editing.
